Organization of one day awareness-cum-motivational campaign on
MSME

Sir,

With reference to the discussion held on Dt.21/12/2019, I am to inform you that DIC, Jharsuguda is going to organize one day awareness-cum-motivational campaign on Dt. 24/12/2019 at 11 AM in your Institute to motivate the youth for self employment as well as to make them aware about different facilities and handholding supports under different policies of state Govt.

Hence, I would request you to arrange at least 100 participants to attend the said programme so as to make it success.

Your active cooperation will be highly solicited.

Yours faithfully,

CERTIFICATE

This is to certify that Ms MAMTA THAKUR a student of +3 science +3 SCIENCE 6th Semester (PHYSICS HONORS) of brajrajnagar college has successfully completed the project work entitled "NUCLEAR REACTOR" for the session 2021/2022 for the partial fulfillment of the requirement of +3 science final semester under my supervision and guidance.

This project work has been found to be unique and reflects the sincere effort of the student to get it submitted in time.

INTRODUCTION

The first nuclear reactor was designed to use in bombs to generate ^{239}Pu . After that, these reactors are used for different purposes like electricity generation and also used in propelling ships for generating radioisotopes and supply heat. There are different types of nuclear reactors available in different designs where the power generation in these reactors mainly depends on the nuclear fission. The frequently used reactors are the PWR (Pressurized Water Reactor), BWR (Boiling Water Reactor) & PHWR (Pressurized Heavy Water Reactor). This article discusses an overview of a nuclear reactor, components, and types.

What is a Nuclear Reactor?

Definition: The nuclear reactor is an essential system in a nuclear power plant. They include nuclear chain reactions to generate heat using a method called fission. The heat which is generated can be used to make steam for spinning a turbine. So that electricity can be generated. In global, there are hundreds of commercial reactors are there, in that above 90 reactors are located in the USA. So nuclear power is one of the largest energy sources for reliable and carbon-free electricity.

How Does a Nuclear Reactor Work?

The main function of the nuclear reactor is to control nuclear fission. The nuclear reactor working principle is nuclear fission and it is one kind of method used for splitting the atoms to generate electricity. Nuclear reactors use uranium that will process into tiny ceramic pellets & stacked jointly into fuel rods. A fuel assembly can be formed by a bunch of above 200 fuel rods. Usually, a reactor core can be fabricated through these assemblies based on the level of power.

INTRODUCTION:-

Corporate governance has been widely recognised for the success of corporation in the business environment governance.

Governance, is the root of the word Governance is from 'gubernate', which means to steer. Corporate governance would mean to steer an organization in the desired direction. The responsibility to steer lies with the board of directors/ governing board. Corporate or a Corporation is derived from Latin term "corpus" which means a "body". Governance means administering the processes and systems placed for satisfying stakeholder expectation. When combined, Corporate Governance means a set of systems procedures, policies, and practices, standards put in place by a corporate to ensure that relationship with various stakeholders is maintained in transparent and honest manner. Corporate Governance is concerned with the intrinsic nature, purpose, integrity and identity of an organization with primary focus on the entity's relevance, continuity and fiduciary aspects.

What is corporate governance?

Corporate Governance is concerned with holding the balance between economic and social goals and between individual and communal goals. The corporate governance framework is there to encourage the efficient use of resources and equally to require accountability for the stewardship of those resources. The concept of governance has been known in both political and academic circles for a long time, referring generally to the task of running a government.

CHAPTER- 1 Introduction

1.0 Introduction

History is the study of life in society in the past, in all its aspect, in relation to present developments and future hopes. It is the story of man in time, an inquiry into the past based on evidence. Indeed, evidence is the raw material of history teaching and learning History aims at helping students to understand the present existing social, political, religious and economic conditions of the people. Without the knowledge of history we cannot have the background of our religion, customs institutions, administration and so on. The teaching of history helps the students to explain the present, to analyze it and to trace its course. Cause- and-effect relationship between the past and the present is lively presented in the history. History thus helps us to understand the present day problems both at the national and international level accurately and objectively.

1.1 Concept of History

History is the analysis and interpretation of the human past enabling us to study continuity and changes that are taking place over time. It is an act of both investigation and imagination that seeks to explain how people have changed over time. Historians use all forms of evidence to examine, interpret, revisit, and reinterpret the past. These include not just written documents, but also oral communication and objects such as buildings, artifacts, photographs, and paintings. Historians are trained in the methods of discovering and evaluating these sources and the challenging task of making historical sense out of them. History is a means to understand the past and present. The different interpretations of the past allow us to see the present differently and therefore imagine—and work towards—different futures. It is often said to be the “queen” or “mother” of the social sciences. It is the basis of all subjects of study which fall under the category of Humanities and Social Sciences. It is also the basis of the study of philosophy, politics, economics and even art and religion.
